

Your Building in the Cloud

Increase your team's efficiency with cloud-accessible Space Management software.

The New World of Building Operations

The COVID-19 pandemic has taught us that many traditional commercial real estate workflows are outdated. Moving forward, property management teams need remote access to their core resources (floor plans, leasing agreements, etc.) in order to work through any business disruptions that might arise. To stay productive in the changing corporate climate, your team needs a software solution that gives you the flexibility to work from anywhere.

See how a cloud-accessible Space Management solution can keep your team members (and tenants) on track no matter the circumstances:

Engineers

Engineers can access floor plans remotely via their mobile devices. This cuts down the time they spend waiting on architects, who can sometimes take days to respond.

Property Managers

Property Managers can easily view floor plans, stacking plans and rent rolls to gain full visibility into their spaces. By recalculating their portfolios to the latest measurement standards, they can update their loss factor and maximize rentable square feet (RSF).

The whole Property Management team

Can collaborate more efficiently than if working from static physical documents. Sharing e-documents that update in real time eliminates the possibility that team members are working from different versions of plans, cuts down on miscommunications and puts the whole team in a position to maximize revenue.

Tenants

Property teams can store tenant-level data within the platform and retrieve it at a moment's notice to give tenants fast responses to their queries. Potential tenants who are uncomfortable with in-person walkthroughs can use virtual space visualization to assess their options, keeping the leasing process moving along.

Asset Managers & Owners

From one secure location, owners and asset managers can access all data needed to evaluate building performance, evaluate if true leasing potential has been met, and make informed decisions faster.

Leasing Brokers

To service occupants requesting modifications to their current layouts, brokers can offer virtual space reconfigurations quicker than would be possible using inflexible physical plans. Brokers can also access dynamic stacking plans, up-to-date marketing plans, and interactive floorplans to help drive leasing strategy.

Prepare your Team for the New Normal

Bring your team into the new world of work with Prism Space Management. Rather than relying on physical documents or an onsite PC, you'll have comprehensive tenant and building information at your fingertips.

From a single screen, you can manage your space, reconfigure floor plans for every tenant scenario, and ensure that your properties are measured to the latest standards. Your team doesn't need to be onsite to continue maximizing RSF, increasing NOI and staying competitive with other buildings in your market.
