

Preventive Maintenance with Building Engines

Managing a comprehensive preventive maintenance program at JLL is essential to extending the lifecycle of equipment, reducing costs and optimizing productivity.

Key Benefits of Preventive Maintenance for JLL include:

JLL Standardized Template

With Building Engines, JLL engineers can remove labor intensive processes through one standardized template that JLL created for preventive maintenance schedules, tasks, and procedures. This allows engineers to complete assignments faster, and more efficiently.

Engineer Enablement

Preventive Maintenance provides tools for JLL to dispatch equipment maintenance and repairs and track those repairs throughout the maintenance cycle. With the Building Engines mobile app, engineers can access what they need at any given time, both online and offline.

Unlimited Training & Support from Building Engines

A true partnership means working side-by-side with JLL to create meaningful solutions specific to your needs. Your dedicated Senior Customer Success Manager, Jessica Como, will provide support and help facilitate training, and this will continue long after implementation.
